**SUPERVISED BY:**

Supervisor Name: Prof. Asante

PROJECT REPORT SUBMITTED TO THE DEPARTMENT OF COMPUTER SCIENCE, FACULTY  
OF PHYSICAL AND COMPUTATIONAL SCIENCES IN PARTIAL FULFILLMENT OF THE  
REQUIREMENTS FOR THE AWARD OF A BACHELOR OF SCIENCE (BSC.) DEGREE IN  
COMPUTER SCIENCE.

SEPTEMBER 2024

**DECLARATION**

We hereby declare that this project report titled "Patfran Cleaning Service Management System" is our own work and has not been submitted previously for any academic qualification. All sources of information used have been duly acknowledged.

**ACKNOWLEDGEMENT**

We would like to express our deepest gratitude to Prof. Asante, our supervisor, for his continuous support, valuable guidance, and encouragement throughout the course of this project. His insightful feedback has been instrumental in the successful completion of this work.

We are also grateful to our friends and family for their unwavering support and

motivation. Special thanks to the Department of Computer Science at the Kwame Nkrumah University of Science and Technology for providing us with the platform and resources to undertake this project.

Lastly, we appreciate the efforts of everyone who contributed directly or indirectly to the success of this project.

## **ABSTRACT**

The Patfran Cleaning Service Management System is a web-based application developed to streamline the operations of a cleaning service company. It automates critical business processes, including service management, revenue tracking, expenditure monitoring, payroll management, and employee attendance. The system features dashboards for monthly and yearly performance evaluation, allowing management to track financial performance and service delivery effectively.

By the generation of invoices, receipts, and financial reports, the system reduces manual errors, increases efficiency, and provides real-time data for decision-making. The payroll module facilitates easy management of employee attendance and salary calculations, enhancing transparency. This system is designed to help small- and medium-sized cleaning businesses improve their operational workflows, resulting in better customer service and increased profitability.

## **CHAPTER 1: INTRODUCTION**

### *1.1 Background of the Study*

The cleaning services industry is growing rapidly as individuals and organizations prioritize cleanliness and hygiene. Patfran Cleaning Service Management System is a web-based application aimed at streamlining and automating the day-to-day operations of a cleaning service business. The system will manage services, revenue tracking, expenditure, payroll, and employee attendance. The ultimate goal is to provide a comprehensive solution to improve efficiency and accountability in the cleaning service industry.

### *1.2 Problem Statement*

Managing a cleaning service company involves several manual processes such as generating receipts, managing invoices, tracking expenditures, marking employee attendance, and calculating payroll. These processes are prone to errors, time-consuming, and inefficient. Therefore, there is a need for a web-based system that can automate these tasks and reduce the administrative burden on management.

### *1.3 Objectives of the Study*

The main objectives of the Patfran Cleaning Service Management System are:

To provide a platform to add and manage cleaning services.

To track and report the revenue generated from monthly and yearly services.

To automate receipt and invoice generation for clients.

To record and manage business expenditures.

To track employee attendance and calculate salaries efficiently.

#### *1.4 Scope of the Study*

This project focuses on the design and implementation of a web-based cleaning service management system. The system will include features such as service management, net revenue tracking, receipt generation, invoice management, expenditure tracking, and payroll management. It will also provide dashboards for monthly and yearly service performance.

## **CHAPTER 2: LITERATURE REVIEW**

### *2.1 Introduction*

A cleaning service management system falls within the broader category of business management software, which helps organizations automate various aspects of their operations. This chapter reviews existing systems and their capabilities in handling similar operations.

### *2.2 Existing Systems*

There are various business management systems currently in use, such as **QuickBooks** and **Zoho Books**, which provide basic functionalities for managing invoices and expenditures. However, they are general-purpose and not tailored to the specific needs of a cleaning service business. Our system will fill this gap by offering industry-specific functionalities, such as service management and payroll for cleaning staff.

## **CHAPTER 3: SYSTEM ANALYSIS AND DESIGN**

### *3.1 Introduction*

This chapter focuses on the design and structure of the Patfran Cleaning Service Management System. It details the architecture, system modules, and database schema.

### *3.2 System Architecture*

The system will follow a client-server architecture with the web application hosted on a server and accessed through web browsers. The system will be built using **PHP** for the backend and **MySQL** as the database. The front end will be developed using **HTML, CSS,** and **JavaScript**.

### *3.3 System Modules*

#### **3.3.1 Dashboard Section**

**Add Services:** Allows the admin to add new cleaning services offered.

**Service Management:** Displays all services added to the system, with options for editing or removing them.

**Monthly Service Dashboard:** Displays the number of services rendered each month, the revenue generated, and rankings based on performance.

**Yearly Service Dashboard:** Similar to the monthly dashboard but tracks yearly performance.

#### **3.3.2 Net Revenue Section**

**Net Revenue Summary:** Displays total revenue, total expenditure, and net revenue for a selected time period.

**Weekly, Monthly, and Yearly Revenue Pages:** Breaks down the revenue and expenditure over the specified period.

#### **3.3.3 Receipt Section**

**Generate Receipt:** Allows the admin to create receipts for clients after services are rendered.

**Receipt Management:** Displays a list of generated receipts and offers the ability to print or export them.

**Partial Payments:** Displays all partial payments made by clients.

### ***3.3.4 Invoice Section***

**Generate Invoice:** Allows the admin to generate invoices for clients.

**Invoice Management:** Displays a list of generated invoices and offers the ability to print.

### ***3.3.5 Expenditure Section***

**Generate Expenditure:** Allows the admin to record and categorize business expenses.

**Expenditure Management:** Provides a list of all recorded expenditures.

### ***3.3.6 Payroll Section***

**Add Worker:** Provides a form for adding new staff to the system.

**Mark Attendance:** Allows the admin to mark the attendance of workers.

**View Salary:** Displays the total salary earned by each worker based on attendance.

## **CHAPTER 4: IMPLEMENTATION**

### ***4.1 Technologies Used***

**Backend:** PHP (Hypertext Preprocessor)

**Database:** MySQL

**Frontend:** HTML, CSS, JavaScript

### ***4.2 Database Design***

The database consists of several tables:

services: Stores information about the services offered.

receipts: Stores generated receipts.

invoices: Stores generated invoices.

expenditures: Stores business expenditures.

employees: Stores employee details and attendance.

attendance: Tracks daily attendance of employees.

## **CHAPTER 5: TESTING AND RESULTS**

### *5.1 Introduction*

This chapter discusses the testing approach, methodology, and results of the testing phase.

### *5.2 Testing Methodology*

Unit testing was performed on all modules, and integration testing ensured that all modules worked together seamlessly.

### *5.3 Test Results*

The system was tested on the following criteria:

Service Management: Successfully added, viewed, and deleted services.

Revenue Tracking: Correctly calculated total, weekly, monthly, and yearly revenue.

Receipt and Invoice Generation: Receipts and invoices were generated and displayed correctly.

Expenditure Management: Expenditures were recorded and categorized without errors.

Payroll: Attendance was marked, and salaries were calculated based on attendance.

## **CHAPTER 6: CONCLUSION AND RECOMMENDATIONS**

### *6.1 Conclusion*

The Patfran Cleaning Service Management System successfully streamlines the operations of a cleaning service company. The system automates the process of managing services, revenue, expenditures, and payroll, which greatly improves efficiency and reduces the administrative burden.

### *6.2 Recommendations*

Future versions of the system could incorporate mobile accessibility, additional payment methods, and integration with SMS or email notifications for clients and employees.
